

Worksheet No. - 01

Aim/Overview of the practical: Designing test cases for writing test scripts involves systematically identifying website functionalities, defining input conditions, specifying expected outputs, and documenting step-by-step actions that can be executed either manually or using automation tools (Selenium).

Objective: To design and document test cases for website functionalities by identifying test scenarios, defining input conditions, specifying expected results, and writing step-by-step test scripts that can be executed manually or automated using Selenium.

Procedure/Algorithm/Code

Test Scripts:

```
from selenium import webdriver

from selenium.webdriver.common.by import By

from selenium.webdriver.common.keys import Keys

from selenium.webdriver.support.ui import WebDriverWait

from selenium.webdriver.support import expected_conditions as EC

import time

# Launch Chrome

driver = webdriver.Chrome()

driver.maximize_window()

wait = WebDriverWait(driver, 20)

# Open OrangeHRM

driver.get("https://opensource-demo.orangehrmlive.com/web/index.php/auth/login")

try:

    username = wait.until(
```

```
EC.visibility_of_element_located((By.NAME, "username"))
)
username.send_keys("Admin")
password = driver.find_element(By.NAME, "password")
password.send_keys("admin123")
driver.find_element(By.XPATH, "//button[@type='submit']").click()
wait.until(EC.visibility_of_element_located((By.XPATH, "//h6[text()='Dashboard']")))
print("Login Successful")
except Exception as e:
    print("Login Failed")
    print(e)
time.sleep(2)
print("\n===== TEST CASE 2 : SEARCH =====")
try:
    search = wait.until(
        EC.visibility_of_element_located(
            (By.XPATH, "//input[@placeholder='Search']")
        )
    )
    search.send_keys("Admin")
    time.sleep(2)
    search.send_keys(Keys.ENTER)
    time.sleep(2)
    print("Search Test Passed")
```

except Exception as e:

```
print("Search Test Failed")
```

```
print(e)
```

Clear Search

try:

```
search.clear()
```

except:

```
pass
```

```
time.sleep(2)
```

```
print("\n===== TEST CASE 3 : ADMIN =====")
```

try:

```
admin = wait.until(
```

```
    EC.element_to_be_clickable(
```

```
        (By.XPATH, "//span[text()='Admin']")
```

```
    )
```

```
)
```

```
admin.click()
```

```
wait.until(
```

```
    EC.visibility_of_element_located(
```

```
        (By.XPATH, "//h6[text()='User Management']")
```

```
    )
```

```
)
```

```
print("Admin Page Opened Successfully")
```

except Exception as e:

```
print("Admin Test Failed")

print(e)

time.sleep(2)

print("\n===== TEST CASE 4 : DASHBOARD =====")

try:

    dashboard = wait.until(

        EC.element_to_be_clickable(

            (By.XPATH, "//span[text()='Dashboard']")

        )

    )

    dashboard.click()

    wait.until(

        EC.visibility_of_element_located(

            (By.XPATH, "//h6[text()='Dashboard']")

        )

    )

    print("Dashboard Opened Successfully")

except Exception as e:

    print("Dashboard Test Failed")

    print(e)

    time.sleep(2)

    print("\n===== TEST CASE 5 : PROFILE =====")

    try:

        profile = wait.until(

            EC.element_to_be_clickable(
```

```
(By.XPATH, "//span[@class='oxd-userdropdown-tab']")
```

```
)
```

```
)
```

```
profile.click()
```

```
time.sleep(2)
```

```
print("Profile Menu Opened Successfully")
```

```
except Exception as e:
```

```
print("Profile Test Failed")
```

```
print(e)
```

```
time.sleep(2)
```

```
print("\n===== TEST CASE 6 : LOGOUT =====")
```

```
try:
```

```
logout = wait.until(
```

```
    EC.element_to_be_clickable(
```

```
        (By.XPATH, "//a[text()='Logout']")
```

```
    )
```

```
)
```

```
logout.click()
```

```
wait.until(
```

```
    EC.visibility_of_element_located((By.NAME, "username"))
```

```
)
```

```
print("Logout Successful")
```

```
except Exception as e:
```

```
print("Logout Test Failed")
```

```
print(e)
```

```
input("\nPress Enter to Close Browser...")
```

```
driver.quit()
```

Test Cases:

Test Case	Test Field	Action	Expected Result	Actual Result	Status
TC01	Login	Enter valid username (Admin) and password (admin123), then click Login.	User is logged in successfully and the Dashboard page is displayed.	User logged in successfully and Dashboard page was displayed.	Pass
TC02	Search Bar	Enter "Admin" in the left menu search box.	The Admin menu is filtered and displayed in the navigation panel.	The Admin menu was filtered and displayed successfully.	Pass
TC03	Admin Module	Click on the Admin option from the left navigation menu.	The User Management page opens successfully.	The User Management page opened successfully.	Pass
TC04	Dashboard	Click on the Dashboard option from the left navigation menu.	The Dashboard page opens successfully.	The Dashboard page opened successfully.	Pass
TC05	Profile	Click on the Profile icon in the top-right corner.	The profile drop-down menu is displayed with options such as About, Support, Change Password, and Logout.	The profile drop-down menu was displayed successfully with all options.	Pass

TC06	Logout	Click Logout from the profile drop-down menu.	User is logged out and redirected to the login page.	User was logged out successfully and redirected to the login page.	Pass
------	--------	---	--	--	------

Output

```

OUTPUT  ...  Filter (e.g. text, exclude...)  Code  [X] [Lock] [More] [Full Screen] [Close]

Press Enter to Close Browser...[Running] python -u
"c:\Users\Lenovo\OneDrive\Desktop\Automation\Experiment 1.py"
===== TEST CASE 1 : LOGIN =====
Login Successful

===== TEST CASE 2 : SEARCH =====
Search Test Passed

===== TEST CASE 3 : ADMIN =====
Admin Page Opened Successfully

```

```

OUTPUT  ...  Filter (e.g. text, exclude...)  Code  [X] [Lock] [More] [Full Screen] [Close]

Admin Page Opened Successfully

===== TEST CASE 4 : DASHBOARD =====
Dashboard Opened Successfully

===== TEST CASE 5 : PROFILE =====
Profile Menu Opened Successfully

===== TEST CASE 6 : LOGOUT =====
Logout Successful

Press Enter to Close Browser...

```

Learning outcomes (What I have learnt):

1. Understood the process of designing effective test cases for website functionalities.
2. Learnt to identify test scenarios, input conditions, and expected outputs.
3. Understood manual test scripts for validating web application features.
4. Understood the execution and validation of automated test scripts.
